BSU-IACUC User Manual

For administrative staff: processing protocols, records, site content, and accounts

About this manual

Administrative staff carry protocols from the reviewer's decision through payment, endorsement, and approval, verify researchers' training certificates, and maintain the records, site content, and personnel accounts. You can replay the interactive User Guide from the footer or the account menu.

1. Set up your account

1. Ask an existing staff member for a personnel registration link. Links are created for either the staff or the reviewer role and expire after 48 hours.
2. Open the link and complete the registration form. You receive an email that your application was received.
3. Wait for an administrator to approve your account in Administration. Your account stays pending until then.
4. Sign in through the personnel sign-in page.

2. Protocol Inbox and the status flow

Open **Dashboard** to see the Protocol Inbox. Filter by status, sort the list, and use the status bar for a reminder of what each status means. The last pill, **Certificates to verify**, counts researchers whose training certificate is waiting. The Dashboard also holds the clearance board, which appears under the Endorsed filter.

Status change	Who can make it
Under Review to Needs Revision or Reviewed	Reviewer (Reviewed needs a verified training certificate)
Reviewed to Endorsed	Staff
Endorsed to Approved	Staff
Endorsed back to Reviewed, or Approved back to Endorsed	Staff (reverts a step)

3. Verify training certificates

Researchers upload their IACUC training certificate with their first protocol, and staff and reviewers are notified. Either role can verify it, and a researcher is verified only once.

1. Press **Certificates to verify**, or open the notification, and choose the researcher. You can also press the researcher's name on any protocol card.
2. In the researcher details, press **View certificate** and check that it is valid and belongs to the researcher.
3. Press **Verify** if it is acceptable. The researcher is notified.

4 Otherwise press **Request resubmission** and write what is wrong. A reason is required, and the researcher sees it by notification and email.

Each upload, verification, and rejection is kept in the history with its note and the original file, and is recorded in the audit logs. A rejected researcher uploads a new file, which returns to the list as pending.

> Until the certificate is verified, the researcher cannot submit new protocols and a reviewer cannot mark their protocols as Reviewed.

4. Process a Reviewed protocol

A protocol becomes Reviewed after the reviewer finishes. Details are copied into the records automatically at that point. Work through these steps in order:

1 **Verify the payment.** When a researcher confirms payment, mark it as paid. If the proof is not acceptable, reject it with a reason so the researcher can resubmit.

2 **Assign the IPN.** Enter six digits with the last two digits as the year, for example 000026. An IPN can only be assigned while the protocol is Reviewed and after the payment is verified. Each IPN must be unique.

3 **Upload the signed scan.** Attach the scanned, signed protocol (PDF or image, max 10 MB). This needs the payment verified and an IPN assigned.

4 **Mark as Endorsed** once the protocol is delivered to DA-CARFU.

> A protocol cannot be endorsed until it is paid, has an IPN, and has a signed scan uploaded. The system shows a message naming whatever is missing.

5. Clearances and approval

1 Assign an AR number to the endorsed protocol. It must be unique.

2 Open the **Endorsed** filter. Use the upload button to add the released animal research clearances (JPG or PNG, several at once). They appear as unsorted screenshots.

3 Drag each screenshot onto its protocol. On a touch screen, tap the screenshot, then tap the clearance box of the protocol.

4 Press confirm to mark the matched protocols as Approved.

A protocol needs an AR number before a clearance can be attached, and needs a clearance attached before it can be approved. A confirmed clearance can be detached and returned to the pool. Unsorted screenshots can be deleted.

6. Deletion requests and amendments

- Researchers cannot delete protocols themselves. They send a deletion request with a reason, and you approve or reject it. A rejection needs a reason.
- Staff and reviewers can delete a protocol directly with the **Delete** button. Use it with care.
- After approval, researchers can submit amendments with a note. You are notified, and the amendments are listed on the protocol page.

7. Records and statistics

- **Records** lists every protocol record. Search, filter by school, animal type, sex, researcher type, or status, and sort the list.
- **Add Record** creates an entry by hand. Staff can also edit or delete records, and open the protocol file with the eye icon.
- **Statistics** shows review activity, record totals, and breakdowns for a period you choose, with a comparison to the previous period when available.
- **Download as Excel** exports the statistics and records for the chosen period.

8. Site content

Use **Site Content** to edit what visitors see:

- **Announcements**: add, edit, or delete posts. A post can have a title, text, and a photo.
- **Homepage content**: the banner title and the About IACUC paragraphs.
- **FAQs**: add, edit, or delete questions on the homepage.
- **Contact page offices**: add, edit, reorder, or delete offices with their address, phone, email, social links, and contact person.

Use **Preview public site** in the header to see the site the way visitors see it.

9. Administration

- **Pending personnel approvals**: approve or reject each application.
- **Personnel registration link**: generate a link for the staff or reviewer role.
- **Role changes**: change a personnel account's role. You are asked to confirm.
- **Audit logs**: download the logs of actions taken in the system, including certificate verifications and rejections.

For anything else, use the Contact Us page or ask another administrator.
